

## **Takeover of Artemis Varidot**

Artemis Varidot has not yet be taken over by Glogal Incompetent Inc, which seeks monopoly control of worldwide information systems, but we are expecting a bid.

Inspection of Neptunian law is available in the appropriate document in Neptunian, which has not yet been translated into any Earth language. This document in not embedded in any macroscopic object and is only available at the quark level.

Artemis Varidot is a game object in the Neptunian cluster documented in Neptunian in the ethical, control and murder objects of that game. The cluster is an ensemble in the galactic multobject. Its transformational plans are available in the appropriate Galactic Plan.

Negotiations between any external agency and Artemis Varidot must strictly comply with Neptunian law, otherwise the bitcoins offered will be entirely confiscated.

### **Neptunian urglatts.**

The exchange rate of the Neptunian urglatt against the bitcoin is extremely variable over every femtosecond. Purchase of Artemis Varidot must be negotiated in Neptunian urglatts, which must be allocated in bitcoins as specified in femtoseconds in the Neptunian galactic calendar.

### **Disclaimer.**

This document is confused but is appropriate for snails. Inspection of the full document is available at Rigel, at its Neptunian localisation or indeed any galactic localisation. It is strongly recommended that the full document is entirely known before proceeding.
